MULK LONGEVITY

Blood Age Report

Patient ID: 350	Age: 29.0 years	Gender: Female	Test Date: 2026-10-18

Chrono Age	Blood Age
29.0	30.5

Your biological age is two years older than your chronological age.

WHAT IS BLOOD AGE?

Blood Age provides a comprehensive snapshot of your biological aging. Using our patented AI 'aging clock', we analyse specific cellular markers in your blood to determine your biological age, rather than just counting the years on the calendar based on your actual health status.

YOU ARE A FAST AGER!

You are a fast-ager as your BloodAge is higher than your real age.

You need to take better care of your body to become biologically younger.

How do you compare?

We have compared your blood panel with samples in our database. 62.9% of your peers age slower than you. Attention is recommended.

62.9%

Quick Insights

ORGANS

12 Organ systems evaluated

BIOMARKERS

54 Blood Biomarkers Analysed

AGING

10 Aging Biomarkers found

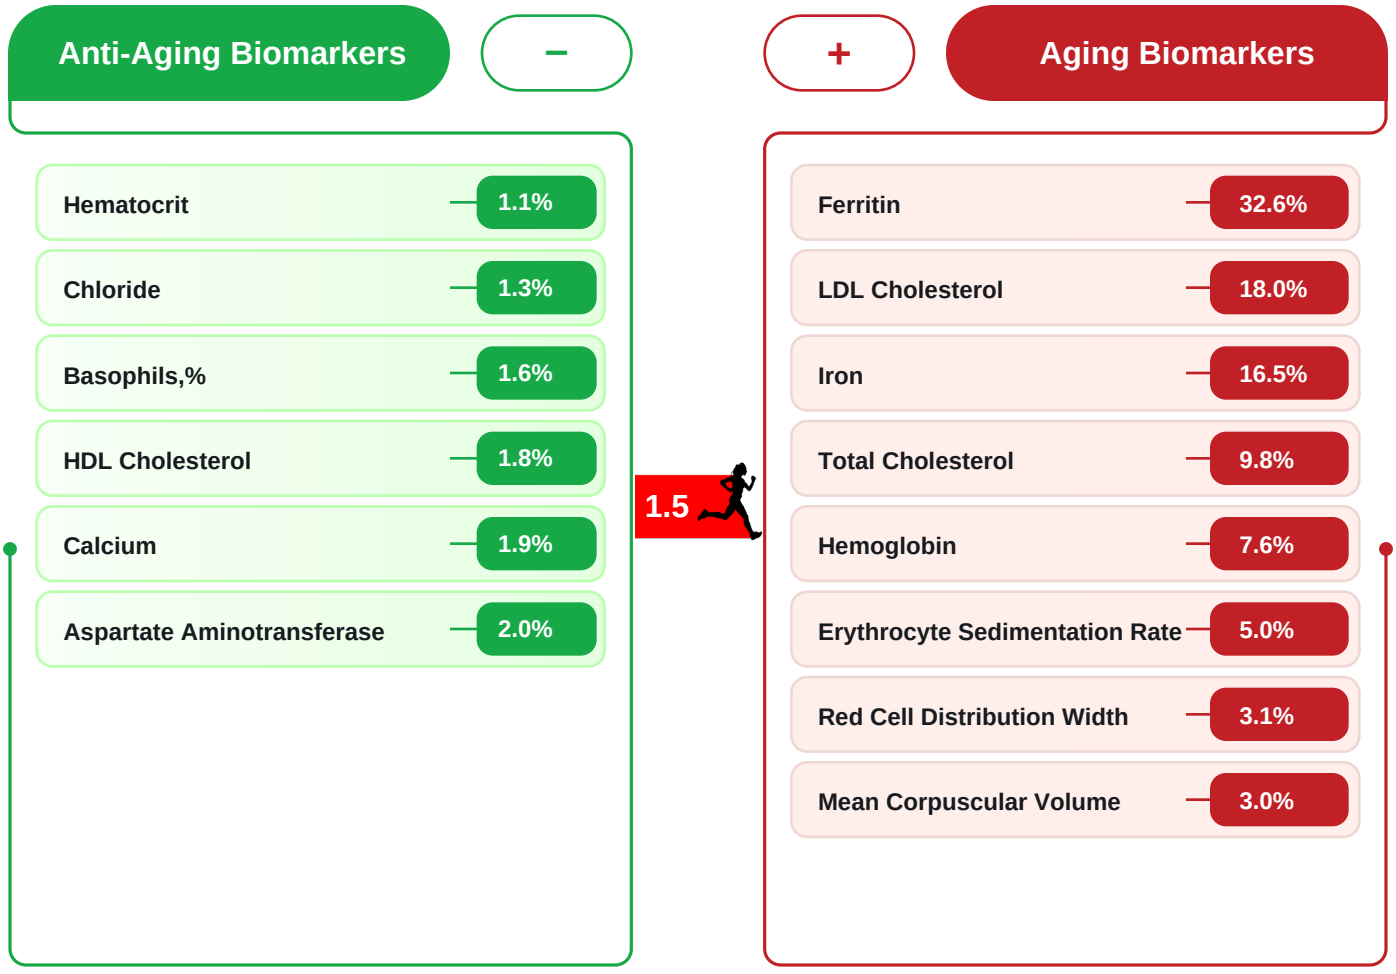

ANTI-AGING

35 Biomarkers are Anti-Aging

Impact of Key Biomarkers

The diagram highlights the 14 biomarkers with the strongest influence, expressed as age equivalents.

- **Red markers increase Blood Age; green markers reduce it.**
- **Your final Blood Age reflects the combined effect of all biomarkers.**

Blood Age Calculation

Cholesterol Status

	Anti-Aging / Impact (Years) / Aging
HDL Cholesterol	-0.15
LDL Cholesterol	+1.75
Total Cholesterol	+0.95
Triglycerides	-0.22

Kidney Status

	Anti-Aging / Impact (Years) / Aging
Blood Urea Nitrogen	-0.34
Creatinine	-0.33
Uric Acid	-0.25

Liver Status

	Anti-Aging / Impact (Years) / Aging
Alkaline Phosphatase	-0.34
Alanine Transaminase	-0.26
Aspartate Aminotransferase	-0.16
Direct Bilirubin	-0.28
Total Bilirubin	-0.24
Gamma-GT	-0.26

Glucose Status

	Anti-Aging / Impact (Years) / Aging
Glucose Fasting	-0.20
Hemoglobin A1c	-0.22

Blood Age Calculation

Red Blood Cells Status

	Anti-Aging / Impact (Years) / Aging
Hematocrit	-0.09
Hemoglobin	+0.74
Mean Corpuscular Hemoglobin	+0.29
MCHC	-0.19
Mean Corpuscular Volume	+0.29
Red Blood Cells	-0.33
Red Cell Distribution Width	+0.30

White Blood Cells Status

	Anti-Aging / Impact (Years) / Aging
Basophils,%	-0.13
Eosinophils,%	-0.21
Lymphocytes,%	-0.20
Monocytes,%	-0.30
Neutrophils,%	-0.22
White Blood Cell	-0.25
Atypical Lymphocyte	-0.25

Iron Status

	Anti-Aging / Impact (Years) / Aging
Ferritin	+3.16
Iron	+1.61

Blood Age Calculation

Clotting Status

Anti-Aging — Impact (Years) — Aging

Platelets	+0.13
Erythrocyte Sedimentation Rate	+0.49
Mean Platelet Volume	-0.32
Platelet Distribution Width	-0.29

Minerals Status

Anti-Aging — Impact (Years) — Aging

Calcium	-0.16
Chloride	-0.11
Potassium	-0.22
Sodium	-0.24
Phosphorous	-0.26

Proteins Status

Anti-Aging — Impact (Years) — Aging

Albumin	-0.22
Total Globulin	-0.24
Total Protein	-0.27

Other Status

Anti-Aging — Impact (Years) — Aging

Alpha-Fetoprotein	-0.29
Alpha-Amylase	-0.17

How your Blood Age was calculated?

Sum Impact Aging 9.7 Years **Sum Impact Anti-Aging** -8.2 Years

Blood Age = Chrono Age + Sum Impact Aging + Sum Impact Anti-Aging

Blood Age = 29.0 + 9.7 Years + -8.2 Years = 30.5

Blood Age > Actual Age

Faster Aging (Higher Risk)

When blood age is older than actual age, it reflects faster aging and worse health.

Health Improvements

Cardiovascular Health — Moderate but can improve

Cardiovascular markers reflect acceptable function with positive tendencies; however, certain patterns indicate that circulatory efficiency and vascular support could benefit from additional optimization. Consistent physical activity and heart-healthy habits may enhance long-term cardiovascular stability.

Bone Health — Moderate but can improve

Bone indicators reflect adequate support with scope for reinforcement. Preventive lifestyle strategies may help strengthen skeletal resilience.

Inflammation Health — Scope for further strengthening

Inflammatory markers show controlled and well-regulated response patterns. Continued alignment with balanced nutrition, regular movement, and stress-supportive routines may help maintain this stability.

Organ Health Scores

Organ Score Legends: Good (60–100) Moderate (40–59) Poor (0–39) Baseline

Biomarker Legends: Unused / Unavailable Biomarkers | Out of Range Biomarkers

Immune Health — 81.0%

Description:
Reflects the body's general ability to defend against routine infections and maintain balanced immune responses essential for everyday resilience and overall well-being.

Related Biomarkers:
Alanine Transaminase, Basophils, C-Reactive Protein, Eosinophils, Erythrocyte Sedimentation Rate, Lymphocytes, Monocytes, Neutrophils, Total Globulin, Total Protein, VIT-D, White Blood Cell

Liver Health — 84.0%

Description:
Indicates the liver's overall functional efficiency in processing nutrients, filtering routine waste, and supporting metabolic balance important for daily physiological stability.

Related Biomarkers:
Alanine Transaminase, Albumin, Alkaline Phosphatase, Aspartate Aminotransferase, C-Reactive Protein, Direct Bilirubin, Ferritin, Gamma-GT, Platelets, Total Bilirubin

Bone Health — 55.0%

Description:
Represents the general condition of bones in terms of strength and mineral support, helping maintain structural stability and everyday mobility across life stages.

Related Biomarkers:
Alkaline Phosphatase, Calcium, Parathyroid Hormone, Phosphorous, VIT-D

Cardiovascular Health — 49.0%

Description:
Describes the overall functioning of the heart and blood vessels in supporting healthy circulation, everyday stamina, and efficient delivery of oxygen and nutrients.

Related Biomarkers:
Apolipoprotein B, C-Reactive Protein, HDL Cholesterol, Lactate Dehydrogenase, LDL Cholesterol, Total Cholesterol, Triglycerides

Organ Health Scores

Organ Score Legends: Good (60–100) Moderate (40–59) Poor (0–39) Baseline

Biomarker Legends: Unused / Unavailable Biomarkers | Out of Range Biomarkers

Glucidic Health — 76.0%

Description:
Indicates the body's general ability to manage blood sugar levels and support stable energy regulation through routine metabolic processes.

Related Biomarkers:
C-Peptide, Glucose Fasting, Hemoglobin A1c, Insulin-like Growth Factor-1

Mineral Health — 73.0%

Description:
Represents the body's overall mineral balance essential for routine cellular functions, energy processes, nerve signaling, bone support, and general metabolic stability.

Related Biomarkers:
Calcium, Chloride, Iron, Magnesium, Phosphorous, Potassium, Sodium

Inflammation Health — 60.0%

Description:
Reflects the balance of typical inflammatory responses in the body, supporting normal recovery, tissue maintenance, and overall systemic stability.

Related Biomarkers:
C-Reactive Protein, Erythrocyte Sedimentation Rate, Ferritin, Neutrophils, Total Protein

Kidney Health — 86.0%

Description:
Indicates the kidneys' general efficiency in filtering routine waste, maintaining fluid and electrolyte balance, and supporting everyday metabolic homeostasis.

Related Biomarkers:
Blood Urea Nitrogen, Calcium, Chloride, Creatinine, Glomerular Filtration Rate, Phosphorous, Potassium, Sodium

Organ Health Scores

Organ Score Legends: Good (60–100) Moderate (40–59) Poor (0–39) Baseline

Biomarker Legends: Unused / Unavailable Biomarkers | Out of Range Biomarkers

Gallbladder Health — 87.0%

Description:
Indicates the gallbladder's general ability to store and release bile, supporting normal fat digestion and digestive function.

Related Biomarkers:
Gamma-GT, Alkaline Phosphatase, Direct Bilirubin, C-Reactive Protein, White Blood Cell, Alanine Transaminase, Aspartate Aminotransferase

Intestinal Health — 67.0%

Description:
Describes general intestinal function in supporting digestion, nutrient absorption, waste processing, and overall digestive balance.

Related Biomarkers:
C-Reactive Protein, Erythrocyte Sedimentation Rate, White Blood Cell, Total Protein, Albumin, Lymphocytes, Ferritin, Chloride

Muscle Health — 89.0%

Description:
Represents overall muscle condition and function, supporting strength, movement, physical performance, and everyday mobility.

Related Biomarkers:
Aspartate Aminotransferase, Creatinine, Lactate Dehydrogenase, C-Reactive Protein

Pancreatic Health — 80.0%

Description:
Reflects general pancreatic function in supporting digestion and maintaining balanced blood sugar through normal metabolic processes.

Related Biomarkers:
Alpha-Amylase, C-Peptide, Glucose Fasting, Hemoglobin A1c, Triglycerides

Weekly Diet Plan

Day	Breakfast	Lunch	Dinner
Monday	Greek yogurt parfait with almonds, chia and dried figs (280 g).	Grilled salmon with quinoa and steamed broccoli (340 g).	Baked chicken with kale, sweet potato and yogurt dip (405 g).
Tuesday	Scrambled eggs with spinach and feta, almond milk (385 g).	Lentil and vegetable stew with kale and carrots (248 g).	Grilled trout with cabbage and amaranth (328 g).
Wednesday	Skyr with pumpkin seeds, chia and dried apricots (278 g).	Chicken and chickpea salad with mixed greens (285 g).	Baked sardines with collard greens and sweet potato mash (398 g).
Thursday	Omelet with kale and cottage cheese, cow milk (390 g).	Beef and vegetable stew with lentils (340 g).	Baked halibut with bok choy and millet (348 g).
Friday	Kefir smoothie with spinach, chia and dried plums (296 g).	Turkey liver and white bean bowl with greens (278 g).	Grilled mackerel with Brussels sprouts and acorn squash (398 g).
Saturday	Plain yogurt with cashews, watermelon seeds and sour cherry (298 g).	Sardine and quinoa power bowl with kale and parsley (266 g).	Roast lamb with cabbage and finger millet porridge (348 g).
Sunday	Poached eggs with kale and ricotta on amaranth porridge (250 g).	Goat leg stew with lentils and mixed greens (298 g).	Baked cod liver oil–marinated salmon with broccoli and kabocha squash (395 g).

Weekly Exercise Plan

Monday 	**Brisk Walking** Sets - NA Duration - 30 minutes Intensity - Moderate	**Recommendation** Walk briskly, maintain upright posture, swing arms naturally, wear supportive shoes, stay hydrated, and monitor breathing and comfort.
Tuesday 	**Swimming** Sets - NA Duration - 30 minutes Intensity - Moderate	**Recommendation** Swim continuously at comfortable pace, focusing on smooth breathing and relaxed strokes. Rest poolside briefly if breathless.
Wednesday 	**Elliptical Trainer** Sets - NA Duration - 30 minutes Intensity - Moderate	**Recommendation** Warm up 5 minutes, maintain steady pace, moderate resistance, upright posture, light grip, monitor breathing and heart rate.
Thursday 	**Cycling** Sets - NA Duration - 30 minutes Intensity - Moderate	**Recommendation** Cycle 30 minutes at comfortable pace, 3-4 times weekly. Maintain upright posture, light resistance, and steady breathing throughout.
Friday 	**Low-Impact Heart Health Walk** Sets - NA Duration - 20 minutes Intensity - Light	**Recommendation** Walk at a comfortable pace, maintain upright posture, swing arms naturally, breathe steadily, and avoid sudden speed changes.
Saturday 	**Heart Health Cardio March** Sets - NA Duration - 30 minutes Intensity - Moderate	**Recommendation** March in place, swinging arms with band tension; maintain upright posture, moderate pace, pain-free range, and steady breathing.
Sunday 	**Low-Impact Heart Health Intervals** Sets - NA Duration - 20 minutes Intensity - Light	**Recommendation** Alternate 1–2 minutes brisk low-impact marching with 1–2 minutes slower pace. Maintain upright posture, controlled steps, monitor breathing.

Lifestyle Recommendations

Legend : Primary Focus Areas

Sleep & Restoration

Sleep Schedule

Consistent Sleep | Morning Alertness

- Get out of bed soon after waking instead of repeatedly snoozing alarms.
- Keep your bedtime and wake-up time within a similar 30–60 minute window on most days.

Deep Relaxation

Yog Nidra | Breath Relaxation

- Follow a guided Yog Nidra session for 10–20 minutes, moving systematically through different stages of deep relaxation.
- Take slow, comfortable breaths and allow your exhale to become slightly longer than your inhale.

Hydration Habits

Hydration Routine

Morning Start | Easy Access

- Have some water after waking to restart your normal hydration routine after the overnight period.
- Keep water within easy reach at the place where you spend most of your day.

Hydration Awareness

Thirst Awareness | Body Signs

- Pay attention when you become thirsty instead of repeatedly postponing drinking because you are occupied.
- Notice a dry mouth or lips as practical signs that may prompt you to check your recent fluid intake.

Inner Balance, Purpose & Environment

Managing Stress

Stress Response | Reduce Overload

- When pressure suddenly rises, pause before deciding what to do.
- Write down your main priorities when too many tasks compete for attention.

Emotional Balance

Know Your Emotions | Balanced Response

- Name the emotion you are feeling before reacting to it.
- When you feel extremely excited or happy, pause and allow the emotion to settle before making an important decision or commitment.

Lifestyle Recommendations

Legend : Primary Focus Areas

Daily Movement & Mobility

Daily Movement

Move Naturally | Movement Into Routine

- Walk to nearby places when distance and safety make it practical.
- Take a short walk after one regular meal when practical.

Reduce Sitting

Break Long Sitting | Change Position

- Stand or walk for a few minutes after an extended period of sitting.
- Alternate sitting and standing when your work setup allows.

Recovery & Energy Management

Physical Recovery

Recover After Activity | Manage Physical Fatigue

- Make the next physically demanding activity lighter when your body has not fully recovered from the previous one.
- Notice when physical tiredness is building across several days rather than judging each day

Rest & Recharge

Quality Rest | Regular Recharge

- Keep some downtime free from any expectation to be productive.
- Reserve some recovery time before your week becomes completely overloaded.

Eating Behaviour & Awareness

Eating Pace

Slow the Pace | Rushed Eating

- Put down your spoon, fork, or food briefly between some bites instead of eating continuously.
- Give yourself realistic time for meals on busy workdays rather than squeezing them into a few

Meal Regularity

Regular Meal Timing | Avoid Long Gaps

- Keep your main meal times within a broadly similar daily pattern when practical.
- Notice when work or other activities repeatedly cause you to delay a normal meal for several hours.

Recommended Supplements

Sn Iron Blood Orange Flv Effer Tab 20S(306)

Benefits

Supports hemoglobin production and oxygen transport in the body.

Kwik Iron Capsule 20S

Benefits

Supports hemoglobin production and oxygen transport in the body.

Nb Easy Iron 28Mg 90'S

Benefits

Supports hemoglobin production and oxygen transport in the body.

Solgar Niacin (Vit-B3) 500Mg Veg Cap 100S (1851)

Benefits

Supports energy metabolism and normal nervous-system and skin function.

Solaray Niacin No Flush 500Mg 100cap

Benefits

Supports energy metabolism and normal nervous-system and skin function.

Solgar No Flush Niacin 500Mg 100'S

Benefits

Supports energy metabolism and normal nervous-system and skin function.

Biomarkers Overview
